

# PARTNER COLLABORATION TOOL

All your cards, in one place

The Partner Collaboration tool is a dedicated portal for Cornèrcard business clients, designed to support CFOs, HR professionals, and anyone responsible for managing company credit cards.

The portal gives you full control over all card-related activities, enabling you to access all card information easily, manage limits, replace cards, and carry out a wide range of tasks independently – directly from your computer.

Within the portal, you can not only track your own actions but also monitor those carried out by your team, ensuring you stay up to date with any changes. To simplify management, you can categorise cards using company-defined IDs or cost centres. You can search for specific individuals or companies under your responsibility, view reports, and access payment and transaction lists, along with many other features. Monthly statements can also be downloaded at any time.

As an administrator, you can create user profiles for your colleagues and assign different levels of access. You can also designate supervisors to enable a four-eyes approval process for financial operations, such as limit management.

## ADVANTAGES AT A GLANCE
